

## ABSTRACT OF THE DISCLOSURE

Petroleum asphalt emulsions which contain recycled tire rubber and processes for making  
5 the emulsions at temperatures above ambient or room temperature. These emulsions may  
contain significant quantities of recycled tire rubber and recycled and reclaimed motor oils and  
fluxes. All of these formulations meet current specifications for products used to make slurry  
seal asphalt pavement coatings, ASTM D 1227 emulsified asphalt roof coatings, and may have  
applications as crackfillers for asphalt and portland cement pavements, and as parking lot seal-  
10 coat materials.
